CAO MINH DUC

SECURITY OPERATIONS ANALYST

Phuoc Hiep Ward, Long Truong District, Ho Chi Minh City

0927 198 521 | minhduc02.122@gmail.com

OBJECTIVE

- Aspiring to develop a career in Network Security and SOC, focusing on security monitoring, event analysis, and operating security solutions such as Firewalls, IDS/IPS, and SIEM systems. Eager to apply hands-on experience in attack detection, log analysis, and incident response within enterprise environments.

TECHNICAL SKILL

- **Operating Systems:** Linux (Kali, Ubuntu, CentOS), Windows Server
- **Network:** TCP/IP, subnetting, routing & switching, DNS, DHCP, HTTP/HTTPS, SSH
- **Cybersecurity:** Understand reconnaissance techniques and attack methods (networks, web applications, and social engineering scenarios) through Ethical Hacking and PortSwigger training.
- **Tools:** SIEM (ELK), IDS/IPS (Suiricata, Snort), Firewall (Pfsense, OPNsense: rule configuration, log analysis)
- **Programing:** C++, Java và Python basic
- **Soft Skills:** Problem-solving, self-learning, teamwork, adaptability, communication

EXPERIENCE

KY NGUYEN SO Company Sep - Dec 2024

Role: Security Intern – Security Solution Support

Ransomware prevention based on open-Source Security Tools

- Designed traffic handling workflows using Python to inspect uploaded files before reaching internal servers
- Configured Squid Proxy as an intermediate layer to filter and control file transfers before forwarding to backend.
- Integrated ClamAV as the primary scanning engine to detect malicious files during upload processes

PROJECT IN LEARNING

Network Monitoring and Protection System: ELK, Suricata, OPNsense Jan - Mar 2025

- Design and implement enterprise network models (IT, Staff, Server) and firewalls with integrated IDS.
- Simulation of internal and external attacks (port scanning, brute-force, C2 communication)
- Collection and analysis of logs from the firewall (OPNsense) and IDS (Suricata)
- Standardization and visualization of data on Kibana for security event monitoring and detection
- Development of an automated alerting mechanism (email alerts) to support incident response

Research and Implementation of a Prompt Injection Detection System in AI Applications Using Machine Learning and Natural Language Processing Aug - Nov 2025

- Researching prompt injection techniques in AI systems and LLM-based applications
- Building a model to detect malicious input behavior using Machine Learning and NLP
- Preprocessing and analyzing text data to identify attack patterns
- Evaluating model performance based on detection accuracy and false positive rate

Malware Analyst:
GG AD LEADS TO MATANBUCHUS INFECTION WITH DANABOT Apr - Jul 2024

- Use a virtual machine (sandbox) to build a malware analysis environment that ensures safety during testing
- Use INetSim to simulate Internet services for analyzing malware behavior and C2 connections
- Monitor processes, DLL injection, and system activity using Process Explorer and Process Monitor
- Analyze network traffic and IOCs using Wireshark to detect abnormal behavior
- Use tools such as PeStudio and OllyDbg to support static and dynamic analysis of malware behavior.

CERTIFICATES

CCNA: Switching, Routing, and Wireless Essentials 02 Jul 2025
Awarded by Cisco Networking Academy

Ethical Hacker 08 Feb 2025
Awarded by Cisco Networking Academy

Partner: NDG Linux Essentials 16 Feb 2024
Awarded by Cisco Networking Academy

CyberOps Associate 02 Nov 2023
Awarded by Cisco Networking Academy

EDUCATION

FPT UNIVERSITY Graduated
